

## Case study 1

### Margaret

Margaret is an 80 year old woman. She had felt perfectly well when she had been out shopping for milk and bread but when she came home she felt light headed and unwell. Her husband had also been out that morning and came home sometime later to find her on the floor. She was unable to speak clearly and couldn't move her right arm and leg. Margaret's husband dialled 999 and she was admitted to hospital.
